DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5 are drawn to a method to assess bone mineral density in male subject comprising measuring serum inhibin B level, classified in class 435, subclass 375, for example.
- II. Claims 6-18 are drawn to a method for diagnosis of increasing bone turnover leading to increased bone loss in women or predicting bone formation in postmenopausal women, comprising measuring serum inhibin A or B level, classified in class 435, subclass 375, for example.
- III. Claims 19-22 are drawn to a method to increase cancellous bone strength or to increase bone volume comprising administering a derivative of inhibin, classified in class 424, subclass 184.1, for example.

The inventions are distinct, each from each other because of the following reasons:

Although there are no provisions under the section for "Relationship of Inventions" in M.P.E.P. § 806.05 for inventive groups that are directed to different methods, restriction is deemed to be proper because these methods appear to constitute patentably distinct inventions for the following reasons: Inventions I-III are directed to methods that are distinct both physically and functionally, and are not required one for the other. Invention I requires search and consideration of assessing bone mineral density in male subject, which is not required by the other. Invention II

Art Unit: 1646

requires search and consideration of diagnosis of increasing bone turnover leading to increased bone loss in women or predicting bone formation in postmenopausal women, which is not required by the other. Invention III requires search and consideration of increasing cancellous bone strength or increasing bone volume, which is not required by the other. Therefore, a search and examination of these methods in one patent application would result in an undue burden, since the searches for the methods are not co-extensive and the subject matter is divergent.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, separate search requirements, and/or different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
